Benzing M1

How to set-up your M1 for Multiple Races and Training

The M1 can handle multiple races and training at the same time and can also display the velocity that the race birds or trainers are flying. Using any of the M1 features will NOT affect the birds entered into your race.

1. If you are training on the race day you can also add this to your M1 by pressing the "Menu" green button.

2. Press the "Training" blue button.

3. Press the "Start" blue button and every coupled pigeon in your M1 that is not locked into a race will be included in your training toss and "Training" will now be displayed below the race details in your display.

4. Pressing the "List" red button will allow you to select and display a list of race birds or trainers that have arrived.

5. You can now access further options if you wish. Press the "Menu" green button.

6. Press the "Training" blue button and you now have 3 options.

7. Press the "Stop" yellow button if you wish to stop the training and release all the training pigeons. Note that the M1 will ask you to confirm your decision to stop training.

8. Press the "List" red button and you will get a further 2 options.

9. Press the "Arrived" yellow button and you will get a list of all the trainers that have arrived home.

10. Press the "Missing' blue button and you get a list of all trainers that are still missing.

11. Pressing the "Speed" green button will allow you to set the M1 to calculate the velocity the trainers or race birds are flying.

12. See "How to set-up your M1 for Velocity" for further info on using the speed button

13. By selecting "Race" at step 6 above you can view which birds have arrived or are still missing, the same way that you did with the trainers.

14. Always press the "Home" button (picture of a house) when finishing any process with the M1.
