

Benzing M1

How to export data using Pidexx

Continuing on with the Pidexx program. Once you have entered all your data into the Pidexx program you can now “Export” that data to a memory stick.

1. Run the Pidexx program.
2. Click on the “Pidexx” tab at the top of the screen just before “Options” tab.
3. Click on “Export”
4. Click on “Fancier Detail”. Do **NOT** select “Complete backup” as your club cannot use this info
5. A “Fancier Data Export” box will appear. Select you club and Fancier number for export. *This is why your club and fancier numbers must be the same on your computer and the club computer, so that the export from your computer and the import to the club computer will be compatible.*
6. Insert your memory stick into one of your USB drives on your computer.
7. Click on the “Build Export File” at the bottom of the pop-up box.
8. Another pop-up box will appear. This is where you decide where you will save the file.
9. Click on the small arrow to the right of the “Save in” box. You get a drop down box where you can select the USB memory stick that you have inserted in your computer.
10. Click on the “USB memory stick” and then click on the “Save” button at the bottom right hand corner.
11. The file will now be saved to the memory stick as a “??.mum” file. The first number(s) before the .mum is your fancier number. Do not change the details of the “mum” file.
12. Hand the memory stick to you club and they can import your data directly into the club program, and using the clubsystem and they can then transfer the info directly into your M1.
